Sir David Attenborough has been a witness to the dramatic changes that have taken place on our planet over the past few decades. In his new book, *Life on Our Planet*, he shares his firsthand account of the environmental crisis facing our planet, and what we can do to address it.

Attenborough begins by describing the natural world as he knew it when he was a child. He recalls a time when rivers were clean, forests were vast, and wildlife was abundant. But over the years, he has watched as these natural wonders have been destroyed by human activity.

Attenborough is particularly concerned about the loss of biodiversity. He points out that we are currently experiencing the sixth mass extinction

event in the history of our planet. This is due to a number of factors, including habitat loss, pollution, and climate change.

Climate change is one of the most pressing environmental issues facing our planet today. Attenborough explains that the Earth's climate has been changing for billions of years, but the rate of change that we are currently experiencing is unprecedented.

Attenborough believes that we can still avoid the worst effects of climate change, but we need to act now. He calls on world leaders to take bold action to reduce greenhouse gas emissions and transition to a clean energy economy.

Attenborough also emphasizes the importance of protecting our oceans. He points out that the oceans are a vital source of food, oxygen, and climate regulation. But our oceans are under threat from pollution, overfishing, and climate change.

Attenborough concludes his book with a message of hope. He believes that we can still turn things around and create a sustainable future for our planet. But we need to act now.

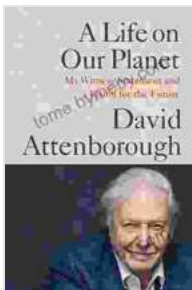

*Life on Our Planet* is a powerful and personal account of the environmental crisis facing our planet. It is a must-read for anyone who cares about the future of our planet.

### **What can we do to help?**

There are many things that we can do to help protect our planet. Here are a few ideas:

- Reduce our carbon footprint by driving less, eating less meat, and using less energy.
- Support renewable energy sources such as solar and wind power.
- Protect our oceans by reducing pollution and overfishing.
- Support sustainable agriculture practices.
- Educate ourselves and others about the environmental crisis.

By working together, we can create a sustainable future for our planet.
