

# Ocean Waves for All Our Universe: A Poetic Journey Through Time and Space

The universe is a vast and mysterious place, full of wonders that we are only beginning to understand. One of the most awe-inspiring things about the universe is its sheer size. It is so vast that it is impossible to even comprehend its scale. The Milky Way galaxy, which contains our solar system, is just one of billions of galaxies in the universe. And each galaxy contains billions of stars.

## Ocean! Waves for All (Our Universe Book 4)

The ocean is also a vast and mysterious place. It covers over 70% of the Earth's surface and contains more than 97% of the Earth's water. The ocean is home to a wide variety of life, from the smallest plankton to the largest whales. The ocean is also a source of food, energy, and transportation.

The ocean and the universe are two of the most powerful and awe-inspiring forces in our world. They are both vast, mysterious, and full of wonder. In this book of poetry, I explore the relationship between the ocean and the

universe. I use the ocean as a metaphor for the universe, and I explore the ways in which the two are connected.

The poems in this collection are lyrical and evocative, taking the reader on a journey through time and space, from the Big Bang to the present day. The poems explore the beauty and wonder of the universe, as well as its vastness and mystery. I hope that these poems will inspire you to think about the universe in a new way, and to appreciate its beauty and wonder.

## **Excerpt from the book**

### **The Big Bang**

In the beginning, there was nothing.

Then, from a point of singularity, A tiny speck of infinite density, The universe exploded into being.

The universe expanded and cooled, And the first stars and galaxies formed.

The ocean was born from the tears of the stars, And the waves have been crashing ever since.

### **The Present Day**

Today, the universe is still expanding, And the ocean is still crashing.

We are but a small part of this vast and mysterious universe, But we are connected to it all.

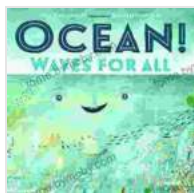

The ocean is in us, and we are in the ocean.

The universe is in us, and we are in the universe.

We are all part of a greater whole, And we are all connected.
